

Assignment : Module 7

Semantic HTML on:

- 1) What is semantic HTML?
→ Semantic HTML is the use of specific HTML tags to clearly define the structure and meaning of the content on web page
- 2) Why semantic tag are important in modern websites.
→ Semantic tags are important for several reasons, primarily improving web accessibility and search engine optimization
- 3) Difference between semantic and non-semantic tags
→ Semantic tags describes the meaning of content.
Non-Semantic tags only define its appearance or layout.

Semantic Tags (Explain with use)

Write notes on the following tags

1) <header>

The HTML <header> element is used to define a container for introductory content or a set of ~~nav~~ navigational links. This typically

Page No.
 Date
 1 & 1

includes a section heading (an `<h1>` - `<h6>` element) and can also contain other element like a logo, a search form, or a table of contents. It is intended to be used as a structural element at the beginning of a document, a section or an article but it not sectioning content itself.

2) `<nav>`

The HTML `<nav>` element defines a section of a page that provides navigation links. This could be a menu, a table of contents or indexes to other pages or parts within the current page. Not all links on a document should be within a `<nav>` element.

3) `<Main>`

The HTML `<main>` element represents the dominant content of the `<body>` of a document. The main content area consists of content that is directly related to or expands upon the central topic of a document or the central functionality of an application.

4) `<Section>`

The HTML `<Section>` element represents a standalone section of a document a generic thematic grouping of content. typically with a heading.

<article>

The HTML <article> element represents a self-contained composition in a document, page, application, or site, which is intended to be independently distributable or reusable. It could be a forum post, a magazine or newspaper article, a blog entry, a user-submitted comment.

<Footer>

The footer tag in HTML defines the footer section of a webpage or an article, typically containing copyright information, author details, contact info, sitemaps, or related links.

Section vs Article

Write a detailed note explaining

What is <Section>

The <Section> HTML element represents a standalone section of a document, typically with a heading.

What is <article>

The <article> HTML element represents a self-contained composition in a document, page, application, or site.

one real-life example for each

* `<section>`: on a university website, a content related to "Admissions", "Academics" or "campus life"

* `<article>`: on a news website, each individual news story or blog post would be marked up using the `<article>` element

Media Tags (Notes)

Write notes on

`<audio>` Tag

The `<audio>` tag is used to embed sound content such as music, podcasts, or audio streams directly into a webpage without needing external plugins.

`<video>` Tag

`<video>` is an HTML5 tag used to embed video content in a document, as movie clip, without relying on third-party plug-ins.

purpose

At least 3 attributes

one real-world use case.

<iframe>

Write a note on

What is <iframe>

An inline frame is used to embed another document within the current HTML document. It creates a nested browsing context, effectively a separate window or frame that displays content from a different source or web page.

Why is it used
content embedding

Two examples where `<iframe>` is required

- 1) embedding a Google map on a contact page to show a physical location
- 2) Embedding a Youtube video player on a blog post or article or article page.

SEO Basics

Write a note on

What is SEO?

SEO (Search Engine optimization)

SEO refers to the practice of increasing the quantity and quality of traffic to a website through organic search engine results.

How Semantic HTML helps SEO

Semantic HTML improves search engine understanding.

Semantic used is HTML (`<header>`, `<Footer>`, `<article>`, `<nav>`).

Role of headings (`<h1>`—`<h6>`) in SEO

Headings provides structure and context.

Headings (`<h1>` through `<h6>`) are crucial for SEO as they help organize content into a logical structure. The `<h1>` tag typically represents the main topic of the page, while subsequent headings (`<h2>`, `<h3>`) denote subtopics.

Accessibility Basics

Write short notes on

What is web accessibility?

Web accessibility is the ~~pract~~ practice of ensuring that web sites and web technologies can be used by everyone, including people with disabilities. It covers all disabilities that affect access to the web, including visual, auditory, physical, speech, cognitive and neurological disabilities.

Why alt attribute is important

The alt attribute provides a text description for an image which is crucial for accessibility. Screen readers use the alt text to describe image to visually impaired users.

How semantic tag help screen readers.

Semantic tags (`<header>`, `<Footer>`, `<article>`, `<nav>`) help screen reader by providing context and structure to the web page.
